

Artificial Intelligence Applications

Artificial Intelligence (AI) refers to systems that mimic human intelligence to perform tasks.

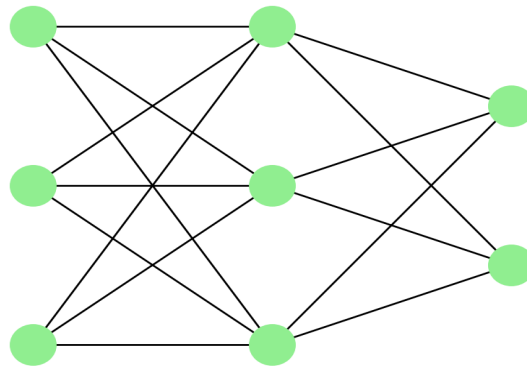

Key Points

1. Natural Language Processing: Understanding human language.
2. Computer Vision: Interpreting visual input.
3. Robotics: Automating physical tasks.

Example Code

```
from textblob import TextBlob  
  
text = 'I love AI applications.'  
blob = TextBlob(text)  
print(blob.sentiment)
```

Illustration:

Conclusion

AI applications are transforming industries worldwide.
